RESTRICTED EXPORT. The item(s) are known as defense related goods governed by U.S. Government International Traffic in Arms Regulations 22 CFR, ITAR Parts 120-130 and therefore require an Export License issued by the U.S. Department of State to be subsequently transported outside of the United States. These items may not be transferred, transshipped or re-exported. In addition, the item(s) may not be disposed of in any other country, either in their original form or after being incorporated into other and items. The International Traffic in Arms Regulations (ITAR) is a set of United States government regulations that control the export of defense-related articles and services on the United States Munitions List. These regulations implement the provisions of the Arms Export Control Act, and are described in Title 22 (Foreign Relations), Chapter (Department of State), Sub chapter M of the Code of Federal Regulations.

Originally with a focus on products meeting the needs of U.S. Special Forces, C. Reed Knight Jr. founded a small company in Vero Beach, Florida to design and manufacture components for these elite troops. Now almost thirty years later, it’s been a history Reed never imagined for himself; a history that has included the design of new weapons with the aid of firearms legends Gene Stoner and Uzi Gal, production of the world’s premier semi-automatic sniper rifle, and founding the largest small arms manufacturing facility in the country. His work has not gone unnoticed. In 1996, Reed Knight was honored with the George M. Chinn Award for his contributions to the field of small arms, and in 2009 Knight’s Armament Company received the Silver Award by the Defense Logistics Agency as Recognition for Excellence. The company started as a research and development facility to produce weapon-related products and services to support the Department of Defense. In 1982, Reed Knight was watching the news when the United States military forces went into Panama. He observed U.S. troops with flashlights duct-taped to their M16 hand guards and commented: “There must be a better way to do that.” This observation, along with desire and a lot of hard work led to a new chapter in contemporary weapons development as the modular rail system was born. In 2009 the 1-millionth rail came off of the highly-automated production line.

Founded as a Research & Development facility over a quarter century ago, KAC has evolved into a premier manufacturer offering completely integrated weapon systems, including night vision. Knight’s is renowned in an industry known for its advanced weapon designs and innovative developments, with R&D and manufacturing under one roof. Moreover, KAC is a world-class engineering powerhouse in cutting edge modular accessories, signature reduction devices and electro-optic devices. KAC’s comprehensive approach to products is noteworthy for its integration levels, compatibility, modular tactical capabilities and superior field performance. Lending “forward in the foxhole,” KAC is taking its design and engineering strength to new future heights.

Dave Lutz

WHEN YOUR LIFE IS ON THE LINE

David A. Lutz, Lt. Col., USMC (Retired)

Lt. Col. Lutz is the Vice President in charge of US Government and Military Operations, as well as Foreign and Military Sales. Lt. Col. Lutz has extensive experience in the military small arms industry, in particular the M-16 weapon family. His military career spanned 23 years - starting in 1968 as a US Marine Corps Rifleman, subsequently serving as an Infantry Platoon Leader in Vietnam. He retired 23 years later as a Lieutenant Colonel. His final assignment was as the Program Manager for Infantry Weapons at the Development Command at Quantico, Virginia. Lt. Col. Lutz's expertise with small arms and his vast knowledge of weapon research & development, military training, operations and tactics, combined with Ordnance Maintenance logistical requirements have played a crucial role in the success of KAC products since 1994 when he first joined Knight's. While on active duty, Lt. Col. Lutz was awarded the Navy Commendation Medal with Combat "V" three Meritorious Service Medals, the Combat Action Ribbon, Vietnamese Cross of Gallantry, Vietnamese Civil Action Ribbon, as well as other service and campaign awards.

dlutz@knightarmco.com

Range 8, Quantico, VA. 1989.

Lt. Col. Lutz describing the attributes of "his" M16A2 Service Rifle to a group of Congressional Staffers.

During his assignment as a PM Infantry Weapons at Quantico (1988-1991), Dave hosted scores of such briefings and hands-on firepower demonstrations as a means of educating Congress on Marine Corps small arms needs. The one standout program he initiated and fostered at such events during that period was an improved 7.62mm Medium Machine Gun (MMG), or what came to be the M240G that soon replaced the Marine Corps aging fleet of M60 MMG based systems.

Lt. Col. Lutz describing the attributes of "his" M16A2 Service Rifle to a group of Congressional Staffers.
Jerry has just come on board with KAC. He is a world renowned shooter who has been conducting firearms training courses for the Department of Defense, Federal and Law Enforcement personnel for more than 20 years. Since 9/11 Jerry has been in such high demand by the Government, he has dropped off the competition circuit and no longer teaches civilian classes as he did previously. Instructing a wide variety of Government personnel, approximately 40 weeks a year, Jerry has been able to impart important life saving shooting skills and share his vast small arms fighting knowledge to many of America’s best, who are headed into harm’s way.

From his thousands of training hours and astronomical round counts, as well as feedback from thousands of students, “The Burner” has developed a rare insight into the weapons and tactics required by deploying end-users. Jerry has been instrumental in testing and evaluating Knight’s Armament Company’s weapons and accessories; adapting and improving those designs to meet the evolving and ever-changing needs of his students.

Kevin is the Military/Government Product Liaison working for Lt. Col. David Lutz (USMC ret. VP of Military Operations). This includes not only U.S. Military, but Military Export Programs, Product Support including Demonstrations and Armorer’s Classes, as well as quotations for Military Sales. Kevin joined KAC in January of 2009, he has a current military background having joined the Canadian Forces as an Artilleryman in 1987, deployed overseas with 4 Bty (Para) 2RCHA, taught at the RCR (Royal Canadian Regiment) Battle School, then transferred to the Infantry in 1994. He then left the regular army (Princess Patricia’s Canadian Light Infantry) at the end of 1997 to the supplementary reserve and returned to college. He rejoined the PPCLI and left 9/11 and deployed to Afghanistan. Kevin ran the PPCLI Shooting Team for two years, and was the Secretary and Treasurer of the Edmonton Garrison Shooting Club. While in the military, Kevin took a number of Armorer and other courses to improve his knowledge of weapon systems, as well as writing several papers on recommended Weapon Fleet Modernization Efforts for the Canadian Forces. It was during this period that he became intimate with KAC products. Kevin left the Canadian Forces in 2005, and did contract work for DoS and DoD, both PSD and other armed contracts in Afghanistan (’05-06) and then Iraq (’06-08). This gave Kevin combat experience with KAC accessories and 5.56mm and 7.62mm weapon systems operationally, as well as a unique perspective on combat systems.

Kevin Boland
kboland@knightarmco.com
PERSONAL DEFENSE WEAPON

The 6mm PDW was designed from the ground up as a Semi/Full Auto weapon, designed to replace the 9mm MP5 submachine gun and short-barrel 5.56mm carbines. Design objectives included: increased lethality over 9mm, improved controllability, reduction in size and weight, and a maximum effective range of 300 meters. The compact design of the weapon and new intermediate caliber 6 x 35mm TSWG ammunition was so successful that the effectiveness and lethality are comparable with the 5.56mm NATO round at ranges to 300 meters. The short barrels and folding buttstock facilitate the ingress and egress from vehicles as the overall length of the weapon does not protrude beyond the shoulders when worn across the body. With abundant ambidextrous features and a dual piston action to maximize reliability, the 6x35mm PDW is the modern ideal of a compact weapon for close quarters combat and for arming vehicle crews. The 6mm PDW is offered in barrel lengths of 8 or 10 inches (203/254 mm).

KAC MUZZLE BRAKE
SR-635

Following on the heels of an exciting “intermediate power” ammunition development from KAC’s 6 x 35mm Personal Defense Weapon (PDW) program, the SR635 is the near-term, low-cost option in this caliber. Using a common lower receiver from 5.56mm AR’s (to include the SR-15’s and 16’s); the SR635 can be achieved by the replacement of the host weapon’s 5.56mm upper receiver with that of the 6 x 35mm SR635’s. No changes to the lower receiver are required except for using the 30-round polymer 6mm magazine. The SR635 system is available as an upper receiver with magazines or can be ordered with SR-15 or SR-16 lower receiver to be assured of the high quality, ambidextrous features, and other benefits of these KAC products.
SR-16 E3 CQB Carbine

Leading the pack in 5.56mm close quarter battle weapons is the SR-16 with an 11.5 inch (292 mm) barrel variant of the Standard E3 SR-16. Surprisingly, the reduced barrel length results in minimal velocity loss as compared to the standard barrel length. The 5.56mm SR-16 E3 Carbine has been the clear choice for elite law enforcement departments and select Federal agencies, where requirements focus on the weapon’s inherent accuracy, reliability, and user-friendly ambidextrous features.

SR-16 E3 CQB CARBINE
P/N: 98510-5

- **Barrel**: 11.5” (29.2cm) 1:7 Twist Hammer Forged Chrome Lined
- **Caliber**: 5.56mm
- **Weight**: 6.19 lbs (2.8 kg)
- **Length**: 27.5”/68.85 cm (Stock Retracted)
SR-16 E3 Standard 5.56mm Carbine

The patented E3 enhanced bolt lug design, assuring both safety and long bolt life, is only one of the many features distinguishing this 5.56mm carbine from the many M4 variants flooding the marketplace. Ambidextrous bolt catch, safety, and magazine release not only give left handed shooters an edge, but offer speed options to right handed shooters as well. The military origin 200-600 meter folding rear sight and integral folding front sight are the ideal back-up iron sight combination when a top rail mounted optical sight is used. The SOPMOD type sliding buttstock provides multiple weapon lengths to accommodate changes in clothing, body armor and different body types. The short 14.5 inch (368mm) barrel strikes a good balance between weapon effectiveness and portability.
M110 Carbine/Compact

Almost as soon as the M-110 SASS, with its 20-inch barrel and fixed/adjustable buttstock, saw combat with the Army, a call for a shorter variant came from vehicle mounted troops and soldiers in urban combat areas. The M-110 Carbine (M-110C) configuration that resulted is a compact variant of the full-size M-110 SASS featuring a 16-inch (406mm), chrome plated, free floating barrel that is externally dimpled to reduce weight while retaining accuracy through optimization of barrel stiffness. The rifle-length URXIII MIL-STD 1913 rail system. Both right- and left-handed shooters will appreciate the full ambidextrous controls for the safety/firing selector, magazine release, and bolt release that complement the new drop in 2-stage match trigger and combat trigger guard. Other features include 45º Off-Set micro-adjustable folding sights, an integrated rear sling attachment, and a 10-position adjustable sliding buttstock. Like the M-110 SASS, the M-110C offers a durable, terrain-matching tan finish to meet Army requirements current theater of operations.

BALL MILL LIGHTENED BARREL
M110
Winner of the U.S. Army award as one of the ‘Best 10 Inventions’ of 2007, the M-110 Semi-Automatic Sniper System (M-110 SASS) is a precision 7.62mm NATO caliber, gas-operated rifle that is highly acclaimed for its battlefield performance. An evolution of the original Mk11, the rifle’s inherent accuracy, quick-change 20-round magazine, ambidextrous safety selector and control systems, abundant MIL-STD 1913 rail mounting capabilities, and effective sound suppressor system, all contribute to the system’s combat success.

Like the Mk11, the heart of the M-110 system is a match-grade 20-inch free-floating barrel with 5R rifling optimized for M118LR sniper ammunition. To meet Army requirements for service in the current theater of operation, a durable flat dark earth colored coating is applied over standard protective finishes.

One of the final weapon designs to come from one of America’s foremost weapon designers, the late Gene Stoner, is the 5.56mm Stoner Light Machine Gun (LMG). This weapon ranks as the world’s most lightweight, simple, versatile, and controllable, belt-fed machine gun. Firing from the open bolt position, the typical recoil effects expected from other systems are mitigated in the LMG. Absence of a bolt buffer means there is no impact of the bolt on the end of its stroke, making the gun very easy to control - even in long bursts. The LMG features a modular MIL-STD 1913 forend with four rail adapters and an under-sling capability for accepting standard 5.56 mm belted ammunition containers. The weapon is extremely accurate due to the secure mounting of the “quick change” barrel, and the reduced length feed cover design, which accommodates loading and unloading without disturbing the zero of the rear sight.

STONER LMG

BELT FED WEAPON

HAMMER FORGED

BALL MILL LIGHTENED BARREL
**Masterkey**

Dynamic entry required! "Mission Accomplished" when your M4 or M16 is equipped with KAC's 12 Gauge Masterkey Shotgun. The Masterkey is a modified Remington 870 Police Magnum, shortened to slightly over 17 inches (432 mm) with an under-mount, "Quick-Detach" mounting adaptor. The Masterkey can also be mounted on Knight's Stand Alone Buttstock Module to create an effective, reduced length tactical shotgun ideal for close quarter’s maneuvering. Either way, the lightweight, hard-hitting, compact Masterkey with its 4-round capacity (3 plus one in the chamber) is a versatile tool, offering high lethality and a tactical edge.

**M203 Grenade Launcher**

The 40mm M203 Grenade Launcher is an area weapon that bridges the gap between hand grenades and mortars. It is often referred to as the "Squad Leader's Artillery." Increasing the battlefield effectiveness of the grenadier/rifleman, KAC's M203 Grenade Launcher offers a "no-tools" quick attach/detach (QD) system to mount the launcher securely to host weapons. Two different sighting systems are available: A leaf sight with 50-250 meter ranging mounts on the top MIL-STD 1913 rail. A second option is an innovative Knight's reflex quadrant sight, graduated from 50 to 400 meters, that facilitates aiming with an electronic "red dot" single aiming point. The quadrant sight may be secured directly to the launcher ensuring that the launcher retains zero even if the sight is moved to another weapon. Mounting options include an alternative "rail grabber" reflex quadrant sight that mounts to the left-hand rail of a MIL-STD 1913 rail, replacing the former carrying handle mounted "iron sight" quadrant.

**MODULAR ACCESSORIES**

**Stand Alone Buttstock Module**

This unique product from KAC was inspired by the utility and accuracy of the combat proven 40mm M79 Grenade Launcher. The effective M79 has since been replaced by the M203 grenade launcher with under mount adapter quick attachment to M4/M16 rifles. In the same manner, the Stand Alone Buttstock Module can accept either the M203 grenade launcher or the Masterkey 12 gauge shotgun, providing military leaders a useful option when tailoring a weapons mix to suit combat conditions. Picatinny rails on both sides and along the top surface of the Buttstock Module provide sight mounting options to accommodate right- and left-hand shooters. Two different buttstock styles are available, both offering incremental length adjustments for various shooter sizes and body armor types.

200WM, a testament to the robust durability
of KAC designs. All KAC products have been
built into it; this reduces the first round flash
End Cap that has a Flash Suppressant design
of the same technology that has gone into
the new QDC Flash Suppressor and made an
End Cap that has a Flash Suppressant design
built into it; this reduces the first round flash
signature 99% from conventional designs.

End Cap that has a Flash Suppressant design
into Recoil Management. KAC first brought
suppressor compatible muzzle brakes to the
military market with the 5.56mm Triple Tap
and Allied Governments, making the MAMS Brakes and
the QDC Flash Suppressors use the same
suppressor interface for interoperability. Due
to desires from the Government to reduce
Muzzle Flash with the suppressor afflicted, KAC
adapted the suppressors to take advantage
of the same technology that has gone into
the new QDC Flash Suppressor and made an
End Cap that has a Flash Suppressant design
built into it; this reduces the first round flash
signature 99% from conventional designs.
Since the majority of hostile encounters
in the Military and Law Enforcement (as well as
potential civilian Home Defense situations)
happen in low light, and enemies tend to fire
at muzzle flashes this revolutionary design will
be a true Soldier Survivability Force Multiplier.

Easily attachable Modular Weapon Systems (MWS) utilize limited space as platforms for performance enhancement. Shooters are able to easily re-position accessories based on their personal preferences. The KAC forend rails replace the traditional plastic forend with four parallel Military Standard 1913 rails pioneered by KAC almost 20 years ago—literally with over a million manufactured and "in service." The rail system enables an operator countless ways to equip the rifle with the best tactical tool combinations for the job. The latest model, Upper Receiver Extending (URX), further integrates this modularity feature with free-floating barrel functionality. The forend section is now integrated with the weapon system's upper receiver/barrel component. The weights of tactical accessories are no longer added to the barrel, thus improving accuracy. Whether it be mounting performance-enhancing accessories such as flashlights, slings, scope or laser mounts, vertical grips and various aiming devices, integrating the URX onto your weapon prevents their potential adverse effects.

Knight's Armament Company has been a key member of several different night vision product development specialist teams for almost 20 years. Through these efforts the Clip-on night vision weapon sight concept was born. This concept allows the war fighter to maintain their level of daytime target acquisition during their night operations. The sight can be removed and reattached without a shift in zero when used with the existing daysight. This and other KAC patented technologies maintain a strong “MADE IN AMERICA” presence worldwide.

Within the last 10 years we have built an established product line that has been fielded by the U.S. Military. Current fielded U.S. Military systems can be identified by the nomenclature of AN/PVS- 22 (UNS®), AN/PVS-26 and AN/PVS-29 (UNS®LR). Our mid-range UNS®T and long range UNS®TLR thermal systems allow the user to detect body heat and temperature variations in any situation, day or night. There is even a fusion sight that merges both technologies into one, the FIST® (Fused Imaging Sniper Technology). It takes the night vision (green) and merges it with the thermal channel for the best of both worlds out to 800 meters.

The UNS®, UNS®LR, UNS®T, UNS®TLR and FIST®, make up the complete family of image intensified, thermal and fused sights. These are trademarked names of Knight's Armament Company LLC.
