INTERMEDIATE CALIBERS

Keeping pace with the state of the art in precision semi-automatic rifle application, Knight's Armament Company has developed intermediate caliber upgrade options for the M110/SR-25 type series of rifles. Intermediate calibers, such as .260 Remington and 6.5mm Creedmoor, provide high ballistic coefficient projectiles and resulting longer maximum effective range, with reduced recoil when compared to contemporary .308 Winchester/7.62mm NATO rifles of similar size and weight. KAC can offer a number of solutions to meet user needs; from barrel length to suppressor options, and from retrofitting existing platforms to entire purpose-built systems. When it comes to real-world application of precision fire at long range, KAC is ready to provide the solution.

M110 CAPABILITY UPGRADE

M110 INTERMEDIATE CALIBER BARREL CONVERSION

For users of the M110, KAC can provide a simple, low cost/high benefit conversion to intermediate caliber. A replacement barrel assembly, complete with E2 bolt and gas system, can be installed into the M110 at the 2nd echelon maintenance level, and requires no other parts conversion or alteration. The replacement barrel can reuse the existing M110 suppressor, aiding in system cost reduction. In-house function and precision testing ensures that the user is receiving the performance advantage of intermediate calibers. This conversion kit immediately improves the long-range capability of the user while maintaining the appearance of a standard issue M110.

M110/SR-25 UPPER RECEIVER CONVERSION

The modular nature of the M110 and SR-25 series of rifles and carbines has always permitted mission-specific performance alteration by simply changing upper receiver assemblies. KAC can provide complete and tested drop-on intermediate caliber upper receiver kits with the ability to perfectly match performance to requirement. These kits provide optimal opportunity to upgrade existing platforms with a wide swath of other enhancers such as collapsible stock kits, improved BUIS, QDC and/or DSR suppressors, improved trigger options, enhanced modular selectors, and a full catalog of MIL-STD 1913 and M-Lok accessories.

COMPLETE SR-26 SYSTEMS

Knight's Armament Company constantly strives to push the envelope of performance and precision through improved materials, processes, and designs. The latest advancement is embodied in the SR-26, which is designed built for longevity, reliability, and accuracy with intermediate calibers. The URX5 handguard is unparalleled in rigidity, while maintaining the cooling and negative-space accessory mounting that the URX4 is renowned for in the market. Precision machined upper and lower receivers improve accuracy potential without losing ease of field-stripping for cleaning and maintenance. The barrel, flash hider, and suppressor are optimized in unison for performance precision. As with all of KAC's governmental support programs, an array of accessories and enablers are available to complete the package.
