The M110K2 is the latest evolution of the lightweight 7.62mm NATO Carbine. The M110K2 projects 7.62mm NATO performance in a package of comparable weight and size to 5.56mm platforms. Barrel and bolt life well exceed the expectation of a lightweight carbine. An ambidextrous bolt release, selector, and magazine release offer the left-handed user the ergonomic advantages inherent to AR15 based controls, as well as giving right-handed users alternate methods of manipulation to increase efficiency of movement. The Drop -In 2-Stage Trigger serves double duty as an aid to long range precision marksmanship while enabling surgical speed shooting at close range. Both muzzle device options support KAC QDC Signature Reduction Devices; the 5-slot flash hider supports reduction of ground disturbance and location identification without the use of a mounted suppressor, while the MAMS offers significantly reduced recoil and muzzle rise. Available in packages including tailored furniture, optics, and other support items, as well as upgrade options to existing in-service SR-25/M110 systems.
