7.62MM/SR-25 OPERATOR CLEANING KIT CONTINUED

Bore Snake (PN: GA1016) The “Bore Snake” can be washed by hand with soap & water, or machine washed inside of a knotted sock or wash bag. The “Bore Snake” is a quick field expedient method of chamber and bore cleaning when either the time, or the complete cleaning kit, is not available or practical. It is best used with the bolt carrier removed, so the brass weight on the small end can be dropped straight down the bore. Then pull slowly being careful not to snag on the receiver edges as the big end is pulled through the chamber & bore. A few drops of bore cleaner may be added to the area in front of the embedded brass bore brush to aid in cleaning, and likewise gun oil added to the big end for lubrication & protection.

Carbon Brush (PN: GA1015) This brass bristle “Carbon Brush” is for the tail-end of the bolt and the suppressor interface so the User will not wear out the bore or chamber brushes removing the baked-on carbon from those areas.

ITAR
International Traffic in Arms Regulations

RESTRICTED EXPORT. The item(s) are firearm or defense related goods governed by U.S. Government International Traffic in Arms Regulations 22 CFR, ITAR Parts 120-130 and therefore require an Export License issued by the U.S. Department of State to be subsequently transported outside of the United States. These items may not be transferred, transshipped on a non-continuous voyage, or otherwise be disposed of in any other country, either in their original form or after being incorporated into other end items. The International Traffic in Arms Regulations (ITAR) is a set of United States government regulations that control the export of defense-related articles and services on the United States Munitions List. These regulations implement the provisions of the Arms Export Control Act, and are described in Title 22 (Foreign Relations), Chapter (Department of State), Sub chapter M of the Code of Federal Regulations.
